This following is a current listing of claims for the application.

Listing of claims:

1. (original) A process for the production of an optically active amino alcohol represented by the following formula (I)

$$R_{R}^{3}$$
 A^{1}
 A^{2}
 A^{2}
 A^{1}
 A^{2}
 A^{2}

(wherein, R², R³, R⁴, R⁵, A¹, A², m, n and * have the same meanings which will be defined below where the relative configuration of hydroxyl group to amino group on each of asymmetric carbons marked * is trans) or a salt thereof, comprising by reacting an optically active hydroxycarboxylate represented by the following formula (IV)

(wherein, R^1 is an alkyl group having 1 to 6 carbon(s); R^2 to R^5 each independently is hydrogen atom, a lower alkyl group or an optionally-substituted phenyl group; with proviso that R^2 and R^4 or R^2 and R^5 or R^3 and R^4 or R^3 and R^5 taken together with the carbon atoms to which they are attached optionally form' a ring or fused ring; A^1 is - (CH₂) m- while A^2 is - (CH₂) n (where m and n each is an integer of 0 to 3 and m + n is 1 to 3); and * is an asymmetric carbon atom where the relative

configuration of hydroxyl group to alkoxycarbonyl group on each of the asymmetric carbons marked * is trans) with hydrazine to prepare an optically-active hydroxycarboxylic hydrazide compound represented by the following formula (III)

$$R^{3}$$
 R^{4}
 R^{5}
 A^{2}
 $*$
 0
 (III)

(wherein, R² to R⁵, A¹, A², m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to hydrazinocarbonyl group on each of asymmetric carbons marked * is trans), then conducting a Curtius reaction in the presence of an alcohol represented by the following formula

(VI)

$$R^6$$
 OH (VI)

(wherein, R⁶ is an alkyl group having 1 to 6 carbon(s) or an optionally-substituted benzyl group) to give an optically active alkoxycarbonylamino alcohol represented by the following formula (II)

(wherein, R² to R⁶, A¹, A², m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to alkoxycarbonylamino group on each of asymmetric carbons marked * is trans) and then deprotecting a protective group for the amino group.

2. (original) A process for the production of an optically active alkoxycarbonylamino alcohol represented by the following formula (II)

(wherein, R² to R⁶, A¹, A², m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to alkoxycarbonylamino group on each of asymmetric carbons marked * is trans), comprising by reacting an optically active hydroxycarboxylate represented by the following formula (IV)

$$\begin{array}{c}
R^{2} \\
R^{4} \\
R^{5}
\end{array}$$

$$\begin{array}{c}
A^{1} * OH \\
0 \\
0
\end{array}$$

$$\begin{array}{c}
0R^{1} \\
0
\end{array}$$
(IV)

(wherein, R¹ to R⁵, A¹, A², m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to alkoxycarbonyl group on each of the asymmetric carbons marked* is trans) with hydrazine to prepare an optically-active hydroxycarboxylic hydrazide compound represented by the following formula (III)

(wherein, R² to R⁵, A¹, A², m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to hydrazinocarbonyl group on each of asymmetric carbons marked * is trans) and conducting to a Curtius reaction in the presence of an alcohol represented by the following formula (VI)

$$R^6$$
 OH (VI)

(wherein, R⁶ has the same meaning as defined already).

3. (original) The process for the production according to claim 1 or 2, wherein the

optically active hydroxycarboxylate represented by the following formula (IV)

(wherein, R^1 to R^5 , A^1 , A^2 , m, n and * have the same meanings as defined above where the relative configuration of hydroxyl group to alkoxycarbonyl group on each of the asymmetric carbons marked * is trans) is a product prepared by subjecting a β -keto ester represented by the following formula (V)

(wherein, R¹ to R⁵, A¹, A², m and n have the same meanings as defined above) to an asymmetric hydrogenation in the presence of a ruthenium complex including an optically active phosphine compound as a ligand.

- 4. (previously presented) The process for the production according to claims $1\ \text{or}\ 2$, wherein R^6 is an optionally substituted benzyl group.
- 5. (previously presented) The process for the production according to claims 1 or 2, wherein R⁶ is benzyl group.

- 6. (previously presented) The process of claim 3 wherein R^6 is an optionally substituted benzyl group.
 - 7. (previously presented) The process of claim 3 wherein R⁶ is a benzyl group.
